

Dear Sir/Madam:

Prior to examining the subject application, please amend it as follows.

In the Claims

Claims 1-20 Cancelled

21. (New) A snowplow, comprising:
a frame;
a snowplow blade fixedly attached to the frame;
at least a first actuator operatively connected to the snowplow blade for use in maneuvering the snowplow blade;
control electronics operatively connected to engage the at least a first actuator;
and,
wherein the control electronics are preprogrammed to automatically cycle the snowplow through a sequence of operations.
22. (New) The snowplow of Claim 21, wherein the at least a first actuator operatively connected to the snowplow blade for use in maneuvering the snowplow blade is a first hydraulic actuator operatively connected between the frame and a first portion of the snowplow blade; and a second hydraulic actuator operatively connected between the frame and a second portion of the snowplow blade;
wherein the control electronics are operatively connected to selectively independently engage the first and second hydraulic actuators.
23. (New) The snowplow of Claim 22, wherein the control electronics are further comprising:

function engaging means for use in selectively enabling or disabling the control electronics to automatically cycle the snowplow through a sequence of operations, wherein the function engaging means is operatively communicated to the control electronics.

24. (New) The snowplow of Claim 23, wherein the control electronics are preprogrammed to automatically cycle the snowplow through one or more sequences of operations; and,

wherein the function engaging means is operatively communicated to the control electronics to selectively enable the one or more sequences of operations.

25. (New) The snowplow of Claim 22, wherein the control electronics are preprogrammed with at least a first sequence of operations to oscillate the snowplow blade back and forth with abrupt movements for use in removing associated snow from the snowplow blade.

26. (New) The snowplow of Claim 21, wherein the control electronics are operatively communicated to an associated vehicle transmission; and,

wherein the control electronics automatically cycle the snowplow through a sequence of operations responsive to engaging the vehicle transmission.

27. (New) The snowplow of Claim 26, wherein when the associated vehicle transmission is engaged to drive in reverse the control electronics automatically raise the snowplow a predetermined distance.

28. (New) The snowplow of Claim 27, wherein when the associated vehicle transmission is engaged to drive forward the control electronics automatically lowers the snowplow a predetermined distance.

29. (New) The snowplow of Claim 26, wherein when the associated vehicle transmission is engaged to drive in reverse the control electronics automatically lowers the snowplow a predetermined distance.

30. (New) The snowplow of Claim 23, wherein when an associated operator engages the function engaging means the control electronics automatically raises the associated snowplow and tilts the snowplow forward.

31. (New) The snowplow of Claim 23, further comprising:
one or more snowplow lights operatively communicated to the control electronics; and,
wherein when an associated operator engages the function engaging means the control electronics automatically flash the one or more snowplow lights.
